Magic Quadrant for Managed Hybrid Cloud Hosting, Asia/Pacific

Analysts Dennis Smith | Jeff Emanuel

Published 13 December 2017 - Refreshed 6 December 2018

Summary

This Magic Quadrant evaluates managed hybrid cloud hosting providers in Asia/Pacific. It helps infrastructure and operations leaders to select the most appropriate managed hybrid cloud hosting provider for their requirements.

Market Definition/Description

Managed hybrid cloud hosting (MHCH) is a combination of managed hosting and managed hybrid cloud services. It includes managed hosting services for customer-owned or -leased hardware, and managed hybrid cloud services.

Managed hosting offerings have evolved from dedicated hosting to cloud-enabled managed hosting. Managed hosting providers have added cloud-like capabilities to their managed hosting offerings, such as self-service, elasticity, and pay-as-you-use pricing models, to compete against public cloud infrastructure as a service (IaaS) providers.

The managed hybrid cloud hosting market is not limited to a single hosted hybrid cloud or the management of multiple hybrid cloud environments. It includes managed hosting services for customer-owned or -leased hardware, managed hosting services for customer-owned or -leased hardware connected to managed hybrid cloud services, managed hybrid cloud services, and managed hybrid cloud services connected to managed hosting services.

Managed hybrid cloud hosting services include the following:

- Management of managed hosting environments
- Management of hybrid cloud
- Management of multiple hybrid clouds
- Management of managed hosting environments connected to managed hybrid cloud services (including multi-cloud and hybrid cloud)

Managed hybrid cloud hosting services include the following:

- Management of managed hosting environments connected to managed hybrid cloud services (including multi-cloud and hybrid cloud)
