sify

A LEADING **BANK** RELIES ON SIFY FOR SMOOTH BANKING

India's leading Bank transforms its connectivity and system resiliency with Sify's SD WAN at 1500+ locations and secure DC environments resulting in greater business agility, responsiveness and resiliency.

A leading bank relies on Sify for smooth banking

Transformation Goal: To ensure connectivity and system resiliency for business operations

Objectives

- To procure an integrated Network services and Data Center solution
- Robust and resilient network
- To co-locate primary Data Center, Disaster Recovery Center and Near DR
- Seamless transition to SD-WAN network with service provider level redundancy from legacy MPLS Network.

Why Sify was chosen

- Single point of control for Integrated DC, Network & IT Security, IP Telephony
- Bank's confidence on Sify for having delivered various projects for them & other BFSI customers
- Strong interlock with large OEMs for SD-WAN, SDN, NAC and IP telephony solutions in 1500+ locations
- Sify's ability to work with other service providers, including BSNL/MTNL
- Comprehensive understanding of the requirements
- Nation wide robust network presence that meets customer requirement to run applications smoothly with high availability and assured quality of service

Sify's Value Additions

- Bandwidth on demand
- Partnered with other service providers for completely redundant Pan India WAN Network Solution comprising of 1500+ locations with 3000+ Links
- Onsite NOC solution along with monitoring tools and On-Prem resources
- High speed high bandwidth redundant network for sync & async replication across all data centers (existing & new).

Improved branch availability and optimized bandwidth utilization at 1500+ locations

Before Transformation

- Single link at all locations, front-ended by its existing System Integrator
- Traditional MPLS VPN network of 1500+ branches all networked under centralized banking solution.
- Traditional DC Network co-located at Mumbai and NOIDA.

After Transformation

- Network connectivity from two operators.
- Upgrade to latest technology solution with SD-WAN & SDN that supports transport independence, zero touch provisioning, app-aware routing, application visibility, multi-transport aggregation, App-QoS etc.
- Robust edge-to-edge security.
- Co-located at Data Center, Disaster Recovery Center & Near DR at safe, robust and compliant Sify DCs

Customer Success Benefits

- Better focus on their core business as Sify is the single point of control for Integrated DC, Network & Security.
- Improved branch availability, optimized bandwidth utilization and increased application performance.
- Improved end user application experience and customer satisfaction.
- Greater business agility and responsiveness.
