Use Case

Government and public sector

Agentic AI With No Connection to the Outside World

InfinitAIZEN runs governed agentic workflows on an organization's own hardware with no internet connection. Models, retrieval, workflows and audit all run on site, so sensitive data never leaves the perimeter.

sify

What is built to Improve

- Time from install to first production workflow
- Case handling time
- Share of cases handled with AI assistance
- Outbound network connections during operation

The Goal

Teams get AI assistance on sensitive work without an internet connection anywhere in the chain. Security teams can verify that nothing calls out, and auditors see the same complete trail as in any other deployment.

Why InfinitAIZEN

No cloud model API required
InfinitAIZEN is model-agnostic, with cloud, local and air-gapped modes behind the same governed layer.

Not a hosted service
InfinitAIZEN runs inside your own environment. Your data does not leave it.

Sovereign parity
An air-gapped deployment has the same architecture, governance and audit trail as any other.

SYSTEMS
Locally served models, onsite knowledge sources

DEPLOYMENT
Fully air-gapped, on your own infrastructure

Methods Used

- Platform
- Retrieval
- Workflow
- Audit

How It Works

01 Install

InfinitAIZEN is software deployed into your environment. Container images cross the air gap once, and use is governed by license, not by an external service.

Platform

02 Serve models locally

LLM calls go through Aizen's governed execution layer to models served on site. Agents never call a model provider directly

Platform

03 Retrieve locally

The vector store, embeddings and reranking ship with the platform, so knowledge search runs entirely on site.

Retrieval

04 Execute

Workflows run with deterministic rules, agent steps and human approvals, exactly as in any other Aizen deployment.

Workflow

05 Audit

Every write is logged with a correlation ID and before-and-after state, retained inside the perimeter.

Audit

Want to find your Agentic AI maturity and gaps?

Take Sify's Agentic AI Assessment

10 questions, five minutes, see where your organisation stands, identify your readiness and get practical next steps.
