

InfinitAIZEN

Use Case

Finance shared services

The Model Reads the Invoice. The Rules Pay It.

InfinitAIZEN automates invoice processing with AI that reads and classifies every invoice, while deterministic rules decide what gets paid. Anything the model is unsure about is held for a person.

sify

What It is Built to Improve

- Straight-through processing rate
- Invoice cycle time
- Cost per invoice
- Exception rate
- Duplicate or erroneous payments prevented

The Goal

Most invoices flow from receipt to posting without anyone touching them. Every payment decision is made by policy, not by a model, and the AP team spends its time on genuine exceptions.

Why InfinitAIZEN

Reads layouts it has never seen
Agents handle new invoice formats that template-based capture cannot.

The model never approves a payment
The model only reads. Deterministic rules approve.

A trail auditors can follow
Every posting traces back to the extracted values, the rule applied, and the authority behind it.

Methods Used

- Workflow
- Agent
- Rules

How It Works

01 **Receive**
Invoices arrive via email and supplier portals, in any layout.
Workflow

Agent
Read **02**
An analyzer agent extracts supplier details, amounts, line items and PO references, and classifies the invoice.

03 **Gate**
The agent's output is schema-validated. Low-confidence extractions are held for review.
Rules

Rules
Approve **04**
PO and receipt matching, tolerances, supplier status, and approval limits run deterministically.

05 **Post**
Approved invoices post to the ERP under the approval authority defined in policy. Exceptions are routed to the AP team with the reason attached.
Workflow
